this book constitutes the proceedings of the 11th international conference on swarm intelligence ants 2018 held in rome italy in october 2018 the 24 full papers and 12 short papers presented in this volume were carefully reviewed and selected from 69 submissions they are devoted to the field of swarm intelligence as a whole without any bias towards specific research directions

the field of structured p2p systems has seen fast growth upon the introduction of distributed hash tables dhts in the early 2000s the first proposals including chord pastry tapestry were gradually improved to cope with scalability locality and security issues by utilizing the processing and bandwidth resources of end users the p2p approach enables high performance of data distribution which is hard to achieve with traditional client server architectures the p2p computing community is also being actively utilized for software updates to the internet p2psip voip video on demand and distributed backups the recent introduction of the identifier locator split proposal for future internet architectures poses another important application for dhts namely mapping between host permanent identity and changing ip address the growing complexity and scale of modern p2p systems requires the introduction of hierarchy and intelligence in routing of requests structured peer to peer systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured p2p systems as well as provides principles analytical models and simulation methods applicable in designing future systems part i presents the state of the art of structured p2p systems popular dht topologies and protocols and the design challenges for efficient p2p network topology organization routing scalability and security part ii shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints although the strategies are local their efficiency is due to elements of hierarchical organization which appear in many dht designs that traditionally are considered as flat ones part iii describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system these methods were formed in the evolution of hierarchical organization from flat dht networks to hierarchical dht architectures look ahead routing and topology aware ranking part iv highlights some known p2p based experimental systems and commercial applications in the modern internet

the discussion clarifies the importance of p2p technology for building present and future internet systems

the 2008 international symposium on rule interchange and applications ruleml th 2008 collocated in orlando florida with the 11 international business rules rum was the premier place to meet and to exchange ideas from all fields of rules technologies the aim of ruleml 2008 was both to present new and interesting research results and to show successfully deployed rule based applications this annual symposium is the flagship event of the rule markup and modeling initiative ruleml the ruleml initiative ruleml org is a non profit umbrella organization of several technical groups organized by representatives from academia industry and government working on rule technologies and applications its aim is to promote the study research and application of rules in heterogeneous distributed environments such as the ruleml maintains effective links with other major international societies and acts as intermediary between various specialized rule vendors applications industrial and academic research groups as well as standardization efforts from for example w3c omg and oasis

following the emergence of lasers and optical fibers optical networking made its beginning in the 1970s with high speed lans mans in the 1980s when the bandwidth of intercity microwave links turned out to be inadequate for digital telephony the technology for single wavelength optical communications using sonet sdh arrived as a saviour to replace the microwave links however single wavelength links couldn't utilize the huge bandwidth 40 thz of optical fibers while the bandwidth demands kept soaring this necessitated the use of wavelength division multiplexing wdm for concurrent transmission over multiple wavelengths increasing the available bandwidth significantly today optical networking has become an indispensable part of telecommunication networks at all hierarchical levels the book optical networks provides a graduate level presentation of optical networks capturing the past present and ensuing developments with a unique blend of breadth and depth the book is organized in four parts and three appendices part i presents an overview and the enabling technologies in two chapters part ii presents the single wavelength optical networks in three chapters while part iii deals with the various forms of wdm optical networks in four chapters finally part iv presents some selected topics in six chapters dealing with a number of contemporary and emerging topics optical networks provides a comprehensive all in one text for beginning graduate as well as final year undergraduate students and also allows r d engineers to quickly refresh the basics and then move on to emerging topics
